Spotted anything suspicious?

The introduction of harmful, nonnative pests poses a major threat to U.S. plant industries, with serious, long-term ramifications for trade and market access.

Fruit growers are the key to protecting America's crops from exotic pests like false codling moth.

It is important that you be aware of the risk. Watch out for anything unusual in your orchard and report suspicious symptoms to your local extension agent. Early detection helps protect not only your productivity but also your industry.

To find your nearest county extension agent, look for the U.S. Department of Agriculture, Cooperative State Research, Education, and Extension Service's listing in the blue pages of your telephone book or visit **<http://www.csrees.usda.gov/Extension>.**

WATCH, REPORT, PROTECT
PEST WATCH

U.S. Department of Agriculture
Animal and Plant Health Inspection Service
Program Aid No. 1844F
Issued October 2005

The U.S. Department of Agriculture is an equal opportunity provider and employer.
